

To make sure that the camera(s) are working as they should, we prefer to test the camera(s) first at the Blackmagic Design software before configure and test the camera(s) at the **MVI AudioVisual** software.

- Open the **Blackmagic Media Express** application.
- Open the tab called **Log and Capture**.
- At the dropdown menu called **Device** you can see the connected camera(s).
- Select a camera from the dropdown menu **Device**, if you configured the camera the right way, it should show you camera images now.
